

Felix Behboudi

Backend Java Engineer

Berlin, Germany | German Citizen

+49 174 4548555 | F_Behboud@hotmail.com | linkedin.com/in/fbehboudi

Summary

Backend Java Engineer with 5+ years of experience building and operating scalable microservices and REST APIs in production environments. Strong expertise in Java and Spring Boot, with a focus on system reliability, observability, and performance optimization in distributed systems. Hands-on experience with cloud-native deployments using Docker, Kubernetes, OpenShift, and AWS. Track record of reducing production incidents, improving system stability, and delivering maintainable backend solutions in agile cross-functional teams.

Skills

Languages: Java, Python, TypeScript, C#

Backend: Spring Boot, Quarkus, REST APIs, Microservices, Distributed Systems, Backend Development

Architecture & Design: System Design, Scalable Systems, Event-Driven Architecture, Design Patterns, Clean Code

Cloud & DevOps: AWS, Docker, Kubernetes, OpenShift, CI/CD, GitHub Actions, Jenkins, SonarQube

Databases: PostgreSQL, MySQL, MongoDB, JPA, Hibernate, Data Modeling, Query Optimization

Messaging & Integration: RabbitMQ, Kafka, API Integration

Observability & Monitoring: OpenTelemetry, Jaeger, Logging, Monitoring, Distributed Tracing, Grafana

Testing & Quality: JUnit, Mockito, Cucumber, Integration Testing, Unit Testing, Debugging, Code Reviews

Search & Data: Elasticsearch, Elastic Stack, Log Aggregation

Other: Agile, Scrum, Jira, Confluence, Cross-Functional Collaboration

Working Experience and Projects

Software Engineer | Propora (PropTech Venture) | Remote

May 2025 – Mar 2026

- Designed and developed backend services and REST APIs using Java and Spring Boot for a web-based real estate platform.
- Implemented features for property listings, search, user accounts, and internal dashboard workflows.
- Supported testing, containerized deployments, and development environments using Docker and modern engineering workflows.
- Collaborated on product planning, feature delivery, and iterative improvements in a fast-paced startup environment.

Software Engineer at Promos | Berlin, Germany

Jan. 2024–May 2025

- Developed and maintained backend services using Java and Spring-based technologies, focusing on REST APIs in a microservices architecture.
- Implemented business logic for new features based on client requirements in an agile development environment.
- Improved system stability by diagnosing and resolving production issues in distributed systems and enhancing logging and monitoring.
- Enhanced observability with OpenTelemetry and Jaeger, leading to faster debugging and ~30% reduction in production incidents.
- Contributed to CI/CD pipelines and deployment processes in containerized environments, supporting reliable and repeatable releases on OpenShift.

Lead Consultant Engineer at CGI | Berlin, Germany

Sep. 2021 –Nov. 2023

- Developed and maintained Java-based backend services for telecommunications systems in consulting projects
- Designed and implemented REST APIs using Java and Spring, implementing business logic and integrating with external systems, including workflow automation using Camunda for business process orchestration that handled thousands of requests daily.

- Contributed to a microservices-based system deployed with Docker and Kubernetes on AWS, supporting scalable backend services for telecommunications systems in distributed systems handling high-volume requests
- Led design and implementation of backend services and components, contributing to system architecture decisions.
- Optimized system reliability by resolving production issues, reducing recurring incidents by ~20–30%.
- Contributed to frontend development using AngularJS and HTML/CSS when required.

Software Developer at Sportradar | Bremen, Germany

Nov. 2019– Sep. 2021

- Developed and maintained scalable backend services for virtual sports applications using Java.
- Built RESTful APIs and contributed to real-time data processing systems, handling continuous event streams.
- Worked with technologies such as jOOQ, Vert.x, MySQL, and Docker in a microservices-based environment.
- Implemented unit and integration tests using JUnit, improving system reliability and platform availability.
- Improved release efficiency by ~20–30% and reduced manual effort by optimizing build and deployment workflows using Gradle and Maven plugins.

Big Data Research Associate (Ph.D Candidate) at Fraunhofer IWES | Bremen, Germany Mar. 19 – Nov.19

- Collaborated on large-scale data processing using Apache Spark and AWS.
- Developed data processing workflows and algorithms for analyzing wind turbine performance data.
- Contributed to building a distributed computation platform using BOINC for parallel simulations for high-performance systems.
- Part of the research team on high-performance computing and data-driven analysis.

Big Data Engineering intern at Vodafone | Milan, Italy

Jan. 2017 – July 2017

Master Thesis: Big Data Analytics using Elastic Stack.

- Developed data processing and analytics workflows using the Elastic Stack (Elasticsearch, Logstash, Kibana).
- Built dashboards and queries for data visualization and monitoring.
- Processed and transformed large datasets in a Linux environment using Python.

Education

<i>M. Sc. In Computer Science and Engineering</i>	Politecnico di Milano, Italy	2014 -2017
<i>B. Sc. In Computer Software Engineering</i>	Azad University, Iran	2011-2014
<i>A. Sc. In Computer Software Engineering</i>	Bushehr University, Iran	2008-2011

Language

- English — C1 (Professional)
 - German — B2 (Professional working proficiency)
